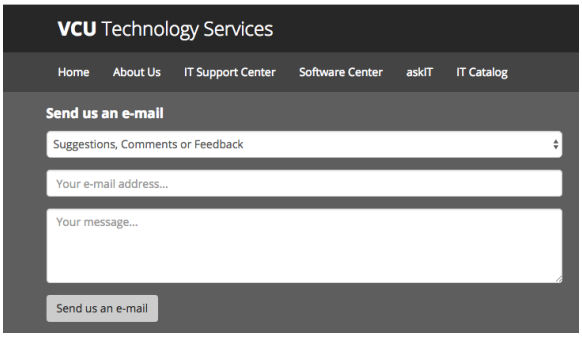
Form accessibility

All forms inputs must have associated labels so screen readers may interpret what content is required for each form input. Labels do not have to be visible, but they must have a screen class so they are still machine readable.



Example

```
<label for="sender" class="sr-only">Your email address</label>
<input type="text" class="form-control margin-btm" name="sender" id="sender" placeholder="Your email
address...">
```
